WHY PIPFA?

PIPFA's Membership entails many advantages like:

- Entitlement to use Designatory Letters APFA or FPFA and distinction of membership.
- Continuing Professional Development through publications, seminars, workshops etc.
- Entitlement for qualification pay etc. to PIPFA Public Sector Qualified.
- Opportunities to inter-act at the national level with elite accounting community.
- Exemptions for other professional qualifications offered by ICAP, CIPFA-UK, ICMAP, CIMA-UK, ACCA etc.
- Professional activities like election of representatives etc.

Salient Features of PIPFA Qualifications:

On qualifying Final Level, one may apply for the management level jobs like Financial Advisor / Financial Officer.

Elevation in Office of Auditor General of Pakistan for BPS -17 is possible after qualifying PIPFA.

Students may join audit firms as Audit Trainee or Intern in Financial Institutes/ Organizations.

MESSAGE OF THE PRESIDENT

I, on behalf of the Board of Governors of PIPFA, feel honored to present you the 24th volume of PIPFA Journal covering the theme "International Public Sector Accounting Standards Challenges and Opportunities". The International Public Sector Accounting Standards (IPSAS) are considered accounting rules for public sector entities around the world for preparation and presentation of financial statements.

IPSAS, came into existence with the aim of improving the quality of financial reporting, efficient decision-making, increased transparency and accountability. Due to financial debt crises, need for financial reporting by governments and the need for improvements in the management of public sector resources have increased with the passage of time.

Effective and transparent financial reporting has the potential to make public sector decision making more accountable. It has been observed that many governments in the past have failed to manage

Mr. Sajid Hussain

their finances due to loss of democratic control, social unrest and uncertainty in meeting the requirements. It mainly monitors the movement of the cash to accrual based recording of government financial transactions in order to record revenues that are earned. Following are some of the opportunities that are offered by IPSAS:

Beneficial for Government Stakeholders

It aids in providing financial information to variety of stakeholders in the government sector. Utilization of public funds must ensure the highest levels of transparency exists across financial processes. It plays a significance role in offering reliable basis of evaluation of the current financial position along with past performance for decision-making purposes.

Leads to Performance Evaluation

It has been observed that transparency and accountability are two greatest motivating factors for adopting IPSAS. Accrual-based financial statements play a significant role in helping governments to demonstrate and evaluate the use of accountability in public funds.

Inventory Management

Detailed inventory management offers stakeholders a clear view of government resources and future obligations. This enables effective administrative processes by placing and controlling the costs in the right place. Liabilities on the government balance sheet offers a view of the long-term implications in terms of spending commitments and borrowing needs.

PIPFA plays a vital role in supporting financial management in the country by offering education and trainings to the public and corporate sectors. The institute focuses mainly in creating effective financial knowledge to ensure flow of work in the fields of accounts, public finance and audit.

The articles in 24th Volume of PIPFA Journal aims to provide knowledge on public financial management through implementation of International Public Sector Accounting Standards (IPSAS) in order to revolutionize public sector with accountancy and transparency.

Message of the Chairman - CPD & Publication Committee

It is an honor to chair the CPD and Publications Committee of the Pakistan Institute of Public Finance Accountants. We at PIPFA strive to enhance the quality of our members; by providing them insight into what is happening in the accounting profession, and of our students; by providing them up to date knowledge based on their curricula.

The theme with which this journal is being published is "IPSAS – Challenges & Opportunities". There have been long drawn debates as to what financial reporting framework is to be used when it comes to the public sector. While the rules of debits and credits remain the same across the globe, however, the flow of transaction, business processes, accounting policies, recognition criteria, etc. vary vastly in the public sector as compared to the corporate sector.

Governmental accountability and transparency in its reporting of assets and liabilities continues to take center stage. Considering this, government bodies and parastatals are continually looking to improve on archaic and often murky processes to meet targets and compliance challenges. The adoption of IPSAS Accrual and IPSAS Cash and Modified Cash reporting framework will improve the quality of financial data and enable alignment across governments and non-governmental organizations (NGOs).

The full range of benefits of implementing IPSAS Accrual and IPSAS Cash and Modified Cash can be captured as part of a wider finance reform, serving as a facilitator to provide high-quality financial information, which in turn, improves opera-

tional and service performance and contributes to the long-term sustainability of public finances. Stakeholders need to understand government finances before making commitments for new ventures and services – IPSAS Accrual and IPSAS Cash and Modified Cash can help them do that.

Transparency and accountability: these are arguably the greatest motivators for adopting IPSAS Accrual or IPSAS Cash and Modified Cash. Transparent accrual-based financial statements help governments to demonstrate, and users to evaluate, accountability in the use of public funds.

Before adopting IPSAS Accrual or IPSAS Cash and Modified Cash basis of accounting, it should be kept in mind that the conversion process will take a significant amount of time. The change to IPSAS is a transformation of the government finance function which has far reaching impacts, requiring comprehensive planning and preparation. Organizational acceptance & ownership and support are central to effective and beneficial implementations of IPSAS Accrual or IPSAS Cash and Modified Cash standards, along with ongoing training of key staff to ensure constant adherence to changing standards. However, there are resources and software available to make IPSAS Accrual and IPSAS Cash and Modified Cash easier for you and to ensure the success of its implementation.

There has to be a rigorous Change Management mechanism in place for adoption of IPSAS in letter and spirit. The Public Sector has its own way of doing things which needs to be

Mr. Samiullah Musa

respected and thoroughly understood and the point of Change Management is reiterated for proper implementation.

I would like to thank and appreciate the efforts of the members who made valuable contributions for this journal as well as team PIPFA.

INTERNATIONAL PUBLIC SECTOR ACCOUNTING STANDARDS AND QUALITY OF FINANCIAL REPORTING IN THE PUBLIC SECTOR OF PAKISTAN

BY KHALID MAHMOOD BAJWA, FCMA

1. Nature of the Public Sector

The primary objective of most public sector entities is to deliver services to the public, rather than to make profits and generate a return on equity to investors. Consequently, the performance of such entities can be only partially evaluated by examination of financial position, financial performance and cash flows. GPFRs provide information to users for accountability and decision-making purposes. Therefore, users of the GPFRs of public sector entities need information to support assessments of such matters as:

- Whether the entity provided its services to constituents in an efficient and effective manner
- The resources currently available for future expenditures, and to what extent there are restrictions or conditions attached to their use
- To what extent the burden on future-year taxpayers of paying for current services has changed; and
- · Whether the entity's ability to

provide services has improved or deteriorated compared with the previous year

Public sector entities include national governments, regional (e.g., state, provincial, territorial) governments, local (e.g., city, town) governments and related governmental entities (e.g., agencies, boards, commissions and enterprises), unless otherwise stated. Governments generally have broad powers, including the ability to establish and enforce legal requirements, and to change those requirements. Globally the public sector varies considerably in both its constitutional arrangements and its methods of operation. However, governance in the public sector generally involves the holding to account of the executive by a legislative body (or equivalent).

The following sections highlight characteristics of the public sector entities:

1.1 The Characteristics of Public Sector Entities

i. Public accountability

Public accountability is an overriding

feature of public sector entities and ensuring the availability of information to demonstrate such accountability is the primary objective of public sector reporting. Public accountability typically encompasses:

- · A conferred responsibility
- An obligation to report back on the discharge of that responsibility
- Monitoring to warrant accountability and Potential sanctions for non-performance.

ii. Multiple objectives

The key aims of most public sector entities do not include generating a profit. Instead, they are to:

- Provide service
- Facilitate resource reallocation and/or
- Undertake policy development.

iii. Rights and responsibilities

The rights and responsibilities of governments provide them the ability, directly and indirectly to affect the economy and society they operate in. The rights and responsibilities may vary by level of government.

Governments can, for example:

- · Tax and set fiscal policy
- Penalize and fine
- Set monetary policy
- Make and enforce laws and regulations.

In exchange, governments have the responsibility to, for example;

- Meet their constitutional or devolved duties
- Set policies to manage the socio-economic issues of the jurisdiction in an efficient, effective, sustainable and transparent manner through the stewardship and application of the public resources entrusted to them
- Deliver services and reallocate resources
- Be accountable for the efficient, effective, sustainable and transparent stewardship and use of the public.

iv. Lack of equity ownership

 Public sector entities do not act to enhance the economic position of the entity for the benefit of owners.

v. Operating and financial frameworks set by legislation

- Public sector entities must operate within and illustrate their compliance with legal requirements.
- Transparent and public accountability against the policy objectives and policies set out in legislation underlies public sector reporting.

vi. Importance and use of budgets

Most governments prepare and make publicly available, their financial budgets. The budget documents are often extensively distributed and referenced. The budget mirrors the financial elements of the government's plans for the forthcoming period. It is the key tool for financial management and control, and is the central component of the process that provides for government and legislative oversight of the financial dimensions of operations.

vii. Governance structure

 The legislature and companies elected officials provide governance

viii. Relationship to statistical reporting

 Relationship to statistical reporting, and the commonalities and differences between general-purpose financial statements (GPFS) and government finance statistics (GFS).

ix. Nature of resources

- Resources of public sector entities are generally held for service provision rather than for their ability to generate future cash flows.
- Exampleincudes heritage and cultural resources and complex infrastructure system. These resources may be held or managed by government organizations at various levels of government. These resources will often require continuous maintenance.

x. The longevity of public sector

 The longevity of public sector and the nature of public sector programs make the going concern concept problematic to interpret in the public sector context. This results in an increased need for information about the long-term sustainability of public sector entity's finance.

xi. Non-exchange transactions

Some of the rights and responsibilities of public sector entities give rise to non-exchange transactions (such as taxes, fines and penalties license and regulatory fees, grants and donations).this means that a large share of transactions of many public sector entities are primarily non-exchange in nature.

2. Users of General Purpose Financial Reports

Governments and other public sector entities raise resources from taxpayers, donors, lenders and other resource providers for use in the

provision of services to citizens and other service recipients. These entities are accountable for their management and use of resources to those who provide them with resources, and to those who depend on them to use those resources to deliver necessary services. Those that provide the resources and receive, or expect to receive, the services also require information as input for decision-making purposes. Consequently, GPFRs of public sector entities are developed primarily to respond to the information needs of service recipients and resource providers who do not possess the authority to require a public sector entity to disclose the information they need for accountability and decision-making purposes. The legislature (or similar body) and members of parliament (or a similar representative body) are also primary users of GPFRs, and make extensive and ongoing use of GPFRs when acting in their capacity as representatives of the interests of service recipients and resource providers.

GPFRs prepared to respond to the information needs of service recipients and resource providers for accountability and decision-making purposes may provide information useful to other parties and for other purposes. For example, government statisticians, analysts, the media, financial

public interest and lobby groups and others may find the information provided by GPFRs useful for their own purposes. Organizations that have the authority to require the preparation of financial reports tailored to meet their own specific information needs may also use the information provided by GPFRs for their own purposes-for example, regulatory and oversight bodies, audit institutions, subcommittees of the legislature or other governing body, central agencies and budget controllers, entity management,

rating agencies and, in some cases, lending institutions and providers of development and other assistance. While these other parties may find the information provided by GPFRs useful, they are not the primary of GPFRs. Therefore, GPFRs are not developed to specifically respond to their particular information needs.

3. Information Needs of the Users of General Purpose Financial Reports

For accountability and decision-making purposes, service recipients and resource providers will need information that supports the assessments of such matters as:

 The performance of the entity during the reporting period in, for example:

Meeting its service delivery and other operating and financial objectives:

Managing the resources, it is responsible for

Complying with relevant budgetary, legislative, and other authority regulating the raising and use of resources

- The liquidity (for example, ability to meet current obligations) and solvency (for example, ability to meet obligations over the long term) of the entity.
- The sustainability of the entity's service delivery and other operations

over the long term, and changes therein as a result of the activities of the entity during the reporting period including, for example:

- The capacity of the entity to continue to fund its activities and tomeet its operational objectives in the future (its financial capacity), including the likely sources of funding and the extent to which the entity is dependent on, and therefore vulnerable to, funding or demand pressures outside its control; and
- The physical and other resources currently available to support the

provision of services in future periods (its operational capacity); and

 The capacity of the entity to adapt to changing circumstances, whether changes in demographics or changes in domestic or global economic conditions which are likely to impact the nature or composition of the activities it undertakes and the services it provides.

The information service recipients and resource providers, need for these purposes is likely to overlap in many respects. For example, service recipients will require information as input for the assessments of such matters as whether:

- The entity is using resources economically, efficiently, effectively and as intended, and whether such use is in their interest;
- The range, volume and cost of services provided during the reporting period are appropriate, and the amounts and sources of their cost recoveries; and
- Current levels of taxes or other resources raised are sufficient to maintain the volume and quality of services currently provided.

Service recipients will also require information about the consequences of decisions made, and activities undertaken, by the entity during the reporting period on the resources available to support the provision of services in future periods, the entity's anticipated future service delivery activities and objectives, and the amounts and sources of cost recoveries necessary to support those activities.

Resource providers will require information as input to assessments of such matters as whether the entity:

- Is achieving the objectives established as the justification for the resources raised during the reporting period
- Funded current operations from

funds raised in the current period from

taxpayers or from borrowings or other sources; and

 Is likely to need additional (or less) resources in the future, and the likely sources of those resources.

Lenders and creditors will require information as input to assessments of the liquidity of the entity and, therefore, whether the amount and timing of repayment will be as agreed. Donors will require information to support assessments of whether the entity is using resources economically, efficiently, effectively and as intended. They will also require information about the entity's anticipated future service delivery activities and resource needs.

4. Information Provided by General Purpose Financial Reports

Information about the financial position of a government or other public sector entity will enable users to identify the resources of the entity and claims to those resources at the reporting date. This will provide information useful as input to assessments of such matters as:

- The extent to which management has discharged its responsibilities for safekeeping and managing the resources of the entity;
- The extent to which resources are available to support future service delivery activities, and changes during the reporting period in the amount and composition of those resources and claims to those resources; and
- The amounts and timing of future cash flows necessary to service and repay existing claims to the entity's resources.

Information about the financial performance of a government or other public sector entity will inform assessments of matters such as whether the entity has acquired resources economically, and used them efficiently and effectively to

achieve its service delivery objectives. Information about the costs of service delivery and the amounts and sources of cost recovery during the reporting period will assist users to determine whether operating costs were recovered from, for example, taxes user charges, contributions and transfers, or were financed by increasing the level of indebtedness of the entity.

Information about the cash flows of a government or other public sector entity contributes to assessments of financial performance and entity's liquidity and solvency. It indicates how the entity raised and used cash during the period, including its borrowing and repayment of borrowing and its acquisition and sale of, for example, property, plant, and equipment. It also identifies the cash received from, for example, taxes and investments and the cash transfers made to, and received from, other governments, government agencies or international organizations. Information about cash flows can also support assessments of the entity's compliance with spending mandates expressed in cash flow terms, and inform assessments of the likely amounts and sources of cash inflows needed in future periods to support service delivery objectives

Information about financial position, financial performance and cash flows are typically presented in financial statements. To assist users to better understand, interpret and place in context the information presented in the financial statements, GPFRs may also provide financial and non-financial information that enhances, complements and supplements the financial

statements, including information about such matters as the government's or other public sector entity's:

- Compliance with approved budgets and other authority governing its operations
- · Service delivery activities and

- achievements during the reporting period; and
- Expectations regarding service delivery and other activities in future periods, and the long term consequences of decisions made and activities undertaken during the reporting period, including those that may impact expectations about the future

This information may be presented in the notes to the financial statements or in separate reports included in GPFRs

Reliability, Credibility and integrity of Financial Reporting, user's decision-making and IPSAS

The public sector administration has been criticized in Pakistan and all over the world, taxpayers want to see an efficient and effective functioning government and a government that is transparent, comparable and consistent with best practices and most importantly, citizens want an accountable government. Externally the pressure for high quality public sector report is even more intense for developing countries who want to issue financial instruments in the financial markets. Further, there exist various crises in many developing countries especially in Pakistan; with government debt levels sitting at very precarious levels. It is therefore imperative that government finances need to be managed very carefully. Many practioners believe this can be achieved by adoption of IPSAS (Ouda, 2004).

It is widely acknowledged that there are fundamental problems that currently inhibit the efficiency and effectiveness of the GOP"s finance and accounting functions. This is due to poor performance of basic financial functions, poor supervision, inadequate financial information and decision support, poor staff motivation and attitudes to accounting and accountability. These inherent problems have suggested as contributing to the slow progress by the Govern-

ment of Pakistan in implementing its Public sector reforms in Particular the IPSAS compared to other Countries of the World. The consequences are lack of management information for decision support; lack of confidence in the information is available because it is not compatible with the Donors and other Partners, lack of credibility and generally overall poor performance.

The public has always demanded a more relevant and reliable financial statements from central Government, a financial statements which captures and encapsulates all useful information required by various users of these financial statements. The adoption of IPSAS concern very important matter because improves the capacity of governments to provide the legislative bodies, citizens, media, Taxpayers, donors, employees and other stakewith understandable. holders relevant, reliable, and comparable financial statements.

One reason that makes high quality public sector reporting necessary in many countries is to make issuance of Government financial instruments attractive in the international financial markets. Further, there exist various crises in many developing countries especially in Pakistan with government debt levels sitting at very precarious levels; and it is no news that government finances need to be managed very carefully thus adoption of IPSAS would increase credibility and assurances of these financial statements.

In light of the pervasiveness and severity of government corruption in many developing countries, financial integrity assurance is a critically important function of their government accounting systems. Achieving this requires high quality information on which to base decisions. Timely, clear and open annual financial statements play a significant role in the accountability of governments to their citizens and their elected repre

sentatives. Corruption may only be reduced by adopting leading practices in financial reporting like IPSAS.

The use of information technology by both the public and private sectors have made the issue of public sector accounting a pertinent part of accounting studies in the world. One of the financial reporting desires of public sectors have been to be able to consolidate its financial statements from various Government departments to a single line; this dream may only be achievable by adoption of IPSAS, which would facilitate the adoption of a uniform and detailed chart of accounts for the elements of the accounting equation. There is likely to be increased level confidence and improved decision-making and in government financial reporting by emphasizing disclosures and presentations of information relevant to the key stakeholders in Government financial reporting.

The study on harmonization of public sector reporting would go a long way in improving the Public Finance Management principles and reporting guidelines of public resources by critically examining the generally accepted accounting and financial standards for maintenance of proper books of account for government and prescribe quality control procedures. It would also examine the prescribed formats for financial statements and reporting by all state organisations and public entities with intention of identifying strengths and weaknesses.

The adoption of IPSAS concern is a very important matter because it improves the capacity of governments to provide the legislative bodies, citizens, media and other stakeholders with understandable, relevant, reliable, and comparable financial statements; implementation of IPASA therefore will improve the quality of financial accountability, governance and financial reporting in Public Sector. In addition, this would

improve the public financial management and decision-making of the government by making Government accounting more transparent and improving its governance framework.

6. Pre-requisites for the effective implementation of IPSAS

i. Technological Development

One of the conditions for the effective implementation of IPSAS by the bodies which sponsor it was a sound accounting information system in place by governments(WB, 1999). With the adoption and implementation of IPSAS the financial information management system of the Government will have to be upgraded to cope with the financial data requirements of the IPSAS standards (Price Waterhouse Coopers, 2011). According to this report, the current integrated Financial Management System (IFMIS) in use by the government for financial management will require to be evaluated for adequacy with the adoption of the new accounting standards.

ii. Political, Legal and Administration

The Financial management Act or any other legal framework for the preparation of Governments financial statements will have to be revised in order to entrench IPSAS basis in the financial management law. A Legal framework will therefore require to be crafted which prescribe IPSAS as the basis of preparation of governments financial statements. The IPSAS concept needs to be embraced by all stakeholders including Parliament, KNAO, Treasury, Government departments, Development Partners .as well as the NGO:S.

iii. Training and Skills

The number of qualified accountants in Pakistan has increased tremendously over the years in both the private and public sectors. However, the IPSAS is a new concept, which is not understood by many. The Government as the leading user of these standards

will have therefore requires undertaking massive capacity building to enlighten its accountants on IPSAS. This is going to be a challenge both in terms of capacity building costs and the required change management issues from the traditional cash accounting to a more business like accounting under accrual basis IPSAS. The adoption of this new financial reporting framework will herald significant changes to the systems and process of financial reporting by the Government. This may come with new formats and financial reporting templates requirements of the various government entities.

7. Benefits of the implementation of IPSAS in the Public Sector

IPSAS improves comparability, harmonization, transparency and accountability in the financial reporting system of the organizations. Furthermore, international accounting standards require that more information be provided and disclosed in an organization's financial statements, leading to better information availability and transparency for decision-making. The major benefits are summarized in the following categories:

- Use of Best Pr1actices to Bring Comparability and Consistency
- Improved Senior Management Decision-Making
- Increased Transparency and Controls
- Annual Audits and Reporting
- Enhanced Financial and Resource Stewardship

I. Use of Best Practices to Bring Comparability and Consistency

By following accounting standards that have been rigorously reviewed by independent third parties, Entity's financial statements can be viewed with increased confidence within the international community. At the same time, the adoption of IPSAS results in improved financial reports, allow

ing the company to provide more meaningful information to users of its financial statements.

II. Improved Senior Management Decision-Making

Sound financial information provides senior management with insight into entity's complex operations and can improve decision-making, especially when it comes to allocating and reallocating resources among regions and competing operational priorities. For example, accrual accounting provides a clearer picture of the company's liabilities, such as employee salaries. Better knowledge of liabilities supports better management of company's assets and liabilities.

Furthermore, IPSAS provides a clear indication of how financial resources have been used in a given period. This helps to assess managerial performance and the effectiveness of the use of resources...

III. Increase transparency and internal controll

IPSAS increases transparency since it requires more financial transactions to be recognized or disclosed either in financial statements (such as inventory, intangible assets, PP&E, accounts payable, accrued staff benefits) or in notes to financial statements.

Reliable financial and operational information promotes trust among contributors and Member States, and results in increased fiscal and political support. The strengthening of internal control mechanisms has been integral to the IPSAS project since IPSAS forces certain additional operational and financial controls onto entity to ensure that the new accounting requirements are met.

IPSAS additionally enhances the role and profile of financial management in general, and the finance function in particular, since it raises awareness of entity's financial performance, leading to improved accountability and decision-making.

IV. Annual Audits and Reporting

Under IPSAS, the External Auditor audits the entity's financial statements and reports on the results of the audit every year instead of every two years. This enhances the accountability of the company and permits a more timely assessment of financial reporting.

V. Enhanced Financial and Resource Stewardship

IPSAS requires the entity to have a complete and documented account of its assets, liabilities, revenue and expenses in its financial statements, leading to enhanced financial and resource stewardship.

8. Conclusion

From the above discussion, it was observed that adoption of IPSAS is expected to increase the level of reliance on public sector financial reporting in Pakistan. It was established that IPSAS based standards will enable the provision of more meaningful information for decision makers and improve the quality of financial reporting system in Pakistan. In addition, it was concluded that the accrual-based IPSAS has the potential to give a better financial integrity assurance compared to cash or modified cash based accounting. Therefore, the above discussion affirmed that with IPSAS, budget and accounting categories at the national level could have a

common set of classifications that conform to international standards which facilitate policy analysis and promote accountability. From the result and findings of the above discussion, we recommend that Pakistani government should implement practical and adequate reforms in public sector management to transfer to the accrual basis of accounting feasibly. Therefore, Pakistani government needs to improve the existing financial management mechanism and policy to enable the implementation of accrual-based accounting. In addition, there is a need to train highly qualified and professional accountants as well as building and developing accounting information system together with information technology. Finally, since the financial reporting system in Pakistan will improve with the adoption of accrual based IPSAS standards and the implementation of IPSAS in the operation and procedures of public sector organization will be beneficial in terms of accountability and transparency, the author recommends the adoption of International Public Sector Accounting Standards.

IPSAS IMPLEMENTATION IN PAKISTAN – BENEFITS AND CHALLENGES

BY: MUHAMMAD SHAHZAD KHAN SHERWANI, FCMA

Preamble

Since the history immemorial the systems developed in the Government were very simple. World was divided into kingdoms, countries and other monarchies ruled over by emperors, kings, queens and monarchs having different titles. Those sovereigns used to collect funds from public and spend it to manage and control their territories and subjects. They had developed departments and offices managed by their trustworthy officers. Some powers including tax collection and public spending were devolved to their subordinate departments and officers. The rulers and their representatives were supposed to provide the basic facilities needed to their subjects at that time likely defence, security, rules & regulation and justice etc. In the ancient times commodities were exchanged (barter system) and the same were also considered equally good for Government revenue and spending. Subsequently, paper currency notes were introduced which was taken equally good for Public Sector revenue collection and spending. They had to manage all the expenditures from the cash collected; hence, cash based Government accounting emerged all over the world especially in the Government offices and Public Sector Organizations.

Introduction of Accrual concept

With the passage of time, the need was felt to develop uniform international accounting standards. Massive research was conducted and in this context an International Accounting Standard Committee (IASC) was established which was responsible for the issuance of International Accounting Standards (IAS) from time to time. It was realized that cash based accounting did not show true and fair view of the Affairs and Financial strength of the Organizations, therefore double entry accounting system was introduced, which was based on the accrual method and was considered as more logical than payment method. It follows the matching concept of accounting.

IASC issued International Accounting Standards (IAS) till March 2001. On April 1, 2001, The International Accounting Standard Board (IASB) was established as successor to the IASC for developing new International Standards called Financial Reporting Standards (IFRS) and to promote

its usage and application. Internal Accounting Standard and International Financial Reporting were adopted by companies / organizations all over the World but the government departments / organizations persisted on their existing practice of Cash Based Accounting.

Development of International Public Sector Accounting Standards (IPSASs)

In 2004, International Public Sector Accounting Standards Board (IPSASB) was established, under the umbrella of the International Federation of Accountants (IFAC), as an independent Public Sector Standards setting Board. IPSASB has issued International Public Sector Accounting Standards (IPSASs) based on International Financial Reporting Standards (IFRS) / International Accounting Standards (IAS) or International Financial Reporting Interpretations Committee(IFRIC)Interpretation. But it does not mean that the IPSASs are replica of IFRS, IAS or IFRIC interpretation. Accrual

accounting has been introduced in IPSASs.

Benefits of Implementing of IPSASs in Pakistan

There are innumerable benefits of adopting IPSAS. Some of the major benefits are outlined below:

- a) Transparency and assurance of fool proof internal control with respect to Income & expenditures and assets & liabilities.
- b) It provides fair and transparent Financial Reporting which will in turn provide Public Accountability and Probity. Therefore there is no harm to implement right to information act.
- More comprehensive information under IPSAS improves management, their stewardship of resources, and result achievement effectively.
- d) Improved consistency and comparability of financial statements.
- e) It provides horizontal and vertical analysis to support decision making.
- f) More comprehensive information about revenue and costs will better support results-based management.
- g) The alignment of Government accounting with best accounting practices through the application of independent accounting standards on accruals basis.
- h) The standards address most situations that governments and public sector organizations may face from time to time.
- i) It may promote the Public Private Partnership.

Challenges in adoption of IPSAS

Development of IPSASs was a challenge but the biggest task is how to implement it. The current transformation of Government Accounting is likened to a global revolution staged by the Accountants. The challenges for adopting IPSASs in developing countries like Pakistan can broadly be divided into the following twocategories:

General challenges

- There are challenges which are inherent to the IPSAS themselves.
- Preparation of road map for reverse design from financial statements to accounting systems.
- The preference to decide the future (Budgeting) is taken as of higher priority than to look back at the past (Financial Accounting);
- The preference to manage some parts of a Government throughout the year (Special Purpose Reports) is taken as more urgent than to monitor the whole Government at year-end (Annual Consolidated Financial Statements).

Specific challenges

These are the challenges which are related to institutional, organizational, political, principle; conceptual and professional etc.aspect, asdiscussed below:

1) Institutional Challenges: IPSAS is a big and bold deal

- in several aspects. It does not believe in prejudice to national diversity in political, cultural, traditional, legal and economic sectors. It uplifts professional dictatorship above Governmental Authority while it expects Government Accounting to be transformed as per global appeal.
- 2) Organizational Challenges:Adoption of IPSAS is a complete change that may face vigorous resistance. Therefore without total organizational transformation and leaders' commitment, its comprehension will end up without any result.
- 3) Political Challenges: The stakeholders who were benefited from old system will sabotage the successful implementation of IPSAS.
- 4) Principle Challenges: Till to date, IPSAS are characterized by numerous detailed rules, only few general principles are regarding financial statements.
- 5) Professional Challenges: presentation of financial statements adopting the IPSAS is a new concept; therefore this is going to be a great challenge both in terms of capacity building costs and the required change management issues from the traditional cash accounting to a more business like accounting under accrual basis IPSAS.
- 6) Skilled Manpower: Its implementation requires capable manpower at top to operational level in different tiers of Government and Public Sector Entities. Presently Professional Accountants don't prefer to work in Public sector because of poor pay and bureaucratic hurdles.
- 7) Infrastructure:For a successful implementation of IPSAS infrastructural resources are needed, which will be the crucial challenge for the developing countries like Pakistan struggling against poverty, corruption and unemployment.

Implementation Issues:

The Author is imparting training on IPSAS to Government Officers jointly organized by ICMA Pakistan and ACCA.

The adoption of IPSAS depends largely on the ability to identify and measure the assets and liabilities of the different tiers of Government and Public Sector Entities.

Efficient and committed transition team should be selected for implementation of IPSAS, which should:

- Be knowledgeable and well trained.
- · Have enough representation from budget, accounting, IT, and Business functional areas.
- Regularly report to a decision making committee having Experts of Finance, Business and legal areas.
- have frequent access to internal and external auditors

Summary and Conclusion

Taking into account the cost involved, capacity building, infrastructure, especially Commitment of elected Politian's and different tiers of government officers; there is no doubt that effective government accounting can make it possible to manage the government's finances smoothly and to provide audit trails to prevent & detect financial misconduct, if any.

The most substantial challenges, for most public sector entities is to adopt accrual-based IPSAS, even if its implementation is properly supported by all the stake holdersare:

- Selection of suitable transition team;
- Possibility of implementing IPSASs on some area of the entity first without having an adverse impact on other areas;
- To complete implementation process within a reasonable timeline;
- · To adopt the standards in a cost-effective manner.

IPSAS wise Challenges:

| IPSAS | ISSUES ADDRESSED | Situation Analysis and challenging task to do |
|---|---|---|
| IPSAS 1. Presentation of Financial Statements | Sets out the overall considerations for the presentation of financial statements, guidance for the structure of those statements and minimum requirements for their content under the accrual basis of accounting. | Currently Public Sector Departments and Authorities are on cash basis it would take long time to train qualified personnel to handle accrual accounting. |
| IPSAS 2. Cash Flow Statements | Requires the provision of information about the changes in cash and cash equivalents during the period from operating, investing and financing activities. | The operation of Public Sector Departments and Authorities is not well defined likewise its financing structure. It will be difficult to define it as per structure. |
| IPSAS 3 Net Surplus or Deficit for the Period, Fundamental Errors and Changes inAccounting Policies | Specifies the accounting treatment for changes in accounting estimates, changes in accounting policies and the correction of fundamental errors defines extra ordinary items and requires the separate disclosure of certain items in the financial statements. | Process and procedures of Public Sector Departments and Authorities needs improvement and it would be difficult describe obstacles in identifying anythingwhich creates errors. |
| IPSAS 4 The Effects of Changes in Foreign Exchange Rates | Deals with accounting for foreign currency transactions and foreign operations. IPSAS 4 sets out the requirements for determining which exchange rate is to be used for the recognition of certain transactions and balances; and how to recognize the financial effect of changes in exchange rates in the financial statements. | The exchange rate in developing countries like Pakistan is highly volatile and adopting this standard may require extra ordinary care in governance of Govt. funds. |
| IPSAS 5 Borrowing Costs | Prescribes the accounting treatment for borrowing costs and requires either the immediate expensing of borrowing costs or, as an allowed alternative treatment, the capitalization of borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset. | Giganticfundsin public sector departments, authorities and government owned companies come as allocation from the Government, either as a grant or as a loan; any standard that will allow borrowings to be expensed may mislead the reports. |

| IPSAS | ISSUES ADDRESSED | Situation Analysis and challenging task to do |
|---|--|---|
| IPSAS 6 Consolidated Financial Statements and Accounting for Controlled Entities | Requires all controlling entities to prepare consolidated financial statements, which consolidate all controlled entities on a line by line basis. The Standard also contains a detailed discussion of the concept of control as it applies in the public sector and guidance on determining whether controlexists for financial reporting purposes. | Consolidation of the Financial statement for the controlled entities is a big deal, as a lot of task has to be completed before preparation of Consolidated Financial Statements. |
| IPSAS 7 Accounting for Investments in Associates | Requires all investments in associates to be Accounted for in the consolidated financial statements using the equity method of accounting, except when the investment is acquired and held exclusively with a view to its disposal in the near future in which case the cost method is required. | do |
| IPSAS 8 Financial Reporting of Interests in Joint Ventures | Requires proportionate consolidation to be adopted as the benchmark treatment for accounting for such joint ventures entered into by public sector entities. However, IPSAS 8 also permits — as an allowed alternative — joint ventures to be accounted for using the equity method of accounting. | In consolidation, Accounting for joint venture using equity method will result in given undue advantage to Government. |
| IPSAS 9 Revenue from Exchange Transactions | Establishes the conditions for the recognition of revenue arising from exchange transactions, requires such revenue to be measured at the fair value of the consideration received or receivable and includes disclosure requirements. | Fair value consideration may results in directing financial reports to preparers' interest (income smoothing). In Government this may lead towards the increase in tendency for corruption. |
| IPSAS 10 Financial Reporting in Hyperinfla- tionary Economies | Describes the characteristics of a hyperinflation- ary economy and requires financial statements of entities which operate in such economies to be restated. | Financial restatement may be cumbersome and difficult. A lot of assumption and value judgment may cause subjectivity. |
| IPSAS 11 Construction Contracts | Defines construction contracts, establishes requirements for the recognition of revenues and expenses arising from such contracts and identifies certain disclosure requirements. | Due to inflation, its application may be difficult. Further, abandoned projects and lack of enforcement rules could be a factor to successful application. |
| IPSAS 12 Inventories | Defines inventories, establishes measurement requirements for inventories (Including those inventories which are held for distribution at no or nominal charge) under the historical cost system and includes disclosure requirements. | Currently Government inventories are not fully accounted for and It will take long time before its compilation. |
| IPSAS 13 Leases | Establishes requirements for the accounting treatment of operating and finance leasing transactions by lessees and lessors. | Proper documentations of agreements is needed for its application. |
| IPSAS 14 Events After the Reporting Date | Establishes requirements for the treatment of certain events that occur after the reporting date, and distinguishes between adjusting and non-adjusting events. | Budget delays and variations are major challenges. |

| IPSAS | ISSUES ADDRESSED | Situation Analysis and challenging task to do |
|---|--|--|
| IPSAS 15 Financial Instruments: Disclosure and Presentation | Establishes requirements for the presentation of on-balance-sheet financial instruments and identifies the information that should be disclosed about both on-balance-sheet (recognized) and off-balance-sheet (unrecognized) financial instruments. | Some Stocks are highly volatile and some are stagnant. Volatility factor is a potential problem in ascertaining the fair value of Financial Instruments. |
| IPSAS 16 Investment Property | Establishes the accounting treatment, and related disclosures, for investment property. It provides for application of either a fair value or historical cost model. | Adequately compiled statistical data of Government Owned Properties is not available |
| IPSAS 17 Property, Plant and Equipment | Establishes the accounting treatment for property, plant and equipment, including the basis and timing of their initial recognition, and the determination of their ongoing carrying amounts and related depreciation. It does not require or prohibit the recognition of heritage assets. | do |
| IPSAS 18 Segment Reporting | Establishes requirements for the disclosure of financial statement information about distinguishable activities of reporting entities. | This requirement is full of ambiguities, tedious work is needed for segment reporting which is difficult even in private sector. |
| IPSAS 19 Provisions, Contingent Liabilities and Contingent Assets | Establishes requirements for the recognition of provisions, and the disclosure of contingent liabilities and contingent assets. | It's difficult to ascertain along with its value |
| IPSAS 20 Related Party Disclosures | Establishes requirements for the disclosure of transactions with parties that are related to the reporting entity including Ministers, senior management, and their close family members. | Corruptions and graft related offenses are major impediments to the realization of this standard. Extra Ordinary care and uprightness is needed to ascertain and disclose the related Party nature of a transaction. |
| IPSAS21 Impairment of Non-Cash-Generating Assets | Ensure that non-cash-generating assets are carried at no more than their recoverable service amount, and to prescribe how recoverable service amount is calculated. | This standard is terminated as par as public entities are concerned. |
| IPSAS 22 Disclosure of Financial Information About the General Government Sector | Sets the disclosure requirements for governments that elect to present information about the general government sector (GGS) in their consolidated financial statements. | A lot of statistical data are needed to realize the provisional requirements of the standard. |
| | The disclosure of appropriate information about the GGS of a government can provide a better understanding of the relationship between the market and non-market activities of the government and between financial statements and statistical bases of financial reporting | |
| IPSAS 23. Revenue from Non-Exchange Transac- tions (Taxes and Trans- fers) | Prescribes requirements for the financial reporting of revenue arising from non-exchange transactions, other than non-exchange transactions that give rise to an entity combination. | It covers the GovernmentGrants in Aid which form a substantial part of revenue in Local Government Authorities and Public Sector Companies. |

| IPSAS | ISSUES ADDRESSED | Situation Analysis and challenging task to do |
|--|---|---|
| | In a non-exchange transaction, an entity either receives value from another entity without directly giving approximately equal value in exchange, or gives value to another entity without directly receiving approximately equal value in exchange | |
| IPSAS 24 Presentation of Budget Information in Financial Statemens | Ensures that public sector entities discharge their accountability obligations and enhance the transparency of their financial statements by demonstrating compliance with the approved budget for which they are held publicly accountable and, where the budget and the financial statements are prepared on the same basis, their financial performance in achieving the budgeted results. | It is difficult to ensure the Budget variations, its presentation. Budget Performance history is not upto the mark |
| IPSAS 25 Employee Benefit | Prescribes the accounting and disclosure for employee benefits. This includes: short-term benefits (wages, annual leave, sick leave, bonuses, profit-sharing and non-monetary benefits); pensions; post-employment life insurance and medical benefits; termination benefits and other long-term employee benefits (long-service leave, disability, deferred compensation, and bonuses and long-term profit-sharing), except for share based transactions and employee retirement benefit plans. | The standard requires a lot of actuarial information, which is currently not available. |
| IPSAS 26 Impairment of Cash-Generating Assets | Prescribes the procedures that an entity applies to determine whether a cash-generating asset is impaired and to ensure that impairment losses are recognized. This standard also specifies when an entity shall reverse an impairment loss and prescribes disclosures. | The provision of impairments may lead to room for smoothing |
| IPSAS27 Agriculture | Sets the accounting treatment and disclosures for agricultural activity. Agricultural activity is the management by an entity of the biological transformation of living animals or plants (biological assets) for sale, or for distribution at no charge or for a nominal charge or for conversion into agricultural produce or into additional biological assets. | Lack of adequate data on government farms asset, implements and produce. Valuation of plantation farms could also be a big challenge. |
| IPSAS 28 Financial Instruments: Presentation | This standard sets the principles for classifying and presenting financial instruments as liabilities or net assets/ equity, and for offsetting financial assets and liabilities. | It is difficult to present and to ensure the Fair value assessment |

| IPSAS | ISSUES ADDRESSED | Situation Analysis and challenging task to do |
|---|---|---|
| IPSAS 29 Financial Instruments: Recognition and Measurement | Establishes principles for recognizing, derecognizing and measuring financial assets and financial liabilities. All financial assets and financial liabilities, including all derivatives and certain embedded derivatives, are recognized in the statement of financial position. | do |
| IPSAS 30 Financial Instruments: Disclosures | Prescribes disclosures that enable financial statement users to evaluate the significance of financial instruments to an entity, the nature and extent of their risks, and how the entity manages those risks. | What constitute risk in Govt. is neither defined nor easy to comprehend |
| IPSAS 31 Intangible Assets | Sets the accounting treatment for intangible assets that are not dealt with specifically in another IPSAS. IPSAS 31 does not apply to intangible assets acquired in an entity combination from a non-exchange transaction, and to powers and rights conferred by legislation, a constitution or by equivalent means, such as the power to tax. | Intangibles are yet to be fully conceptualized in government. |
| IPSAS 32 Service Concession Arrangement: Grantor | Prescribes the accounting for service concession arrangement by the grantor, a public sector entity. | Conceptual challenges, adequate data have never been compiled with respect to appearance of service concession in the financial statement of the Grantor. |

INTERNATIONAL PUBLIC SECTOR ACCOUNTING STANDARD IN PAKISTAN

BY: ABDUS SLAM, FPFA, ACA

- 1. Historical Background
- 2. Implementation progress in Asia
- 3. Implementationin Pakistan
- 4. Future Prospective

1. Historical Background

The International Federation of Accountants (IFAC) is a worldwide body of professional accountants and organizations. In 1986, IFAC set out a public sector group, originally named asa Public Sector Committee, with a mission to focus on the specific needs of this sector. In 2004, IFAC moved to establish an independent Board - the IPSAS Board with revised terms of reference to reflect that the mandate of the Board would be to focus on the issuance of International Public Sector Accounting Standards (IPSASs). International Public Sector Accounting Standards (IPSAS) are the public sector equivalent of International Financial Reporting Standards (IFRS). The

IPSASB's mission is to serve the public interest by developing high-quality accounting standards and other publications to be used by governments and other public sector entities around the world during the preparation of general purpose financial reports.International Public Sector Accounting Standards (IPSAS) are a set of accounting standards issued by the IPSAS Board to be used by public sector entities around the world for the preparation of financial statements. These standards are based on International Financial Reporting Standards (IFRS) issued by the International Accounting Standards Board (IASB).

2. Implementation progress in Asia

Following the Asia crisis of the late 1990s countries in South Asia embarked on financial management reforms in the private and public sectors. Some of the hardest hit countries were Indonesia, Korea and Thailand, but other countries were affected including Malaysia and the Philippines. Funding from donors such as the IMF and the World Bank required public finance management reforms.

including the adoption of accrualaccounting standards based IPSAS.India, Pakistan, Nepal and Bangladesh adopted standards aligned to cash based IPSAS, without announcing a commitment to adopt accrual based IPSAS. Middle East countries - including Abu Dhabi- have adopted, or are in the process of adopting, accrual based IPSAS. Their primary motivation is to provide greater accountability and transparency to enable the countries to improve their public financial management, particularly as they adjust to changes in the commodity prices on which they depend.

| | | chart of it one implementa | tion in Aoia |
|-------------|--------------------|--|------------------------------|
| COUNTRY | ADOPTION STATUS | UPDATE | PROPOSED IMPLEMENTATION DATE |
| Abu Dhabi | In progress | Abu Dhabi is committed to adopting accrual basis IPSAS, but currently uses cash basis IPSAS. | Not announced |
| Bangladesh | In progress | Bangladesh applies a cash basis of accounting based on IPSAS. $\\$ | Not announced |
| India | Not Started | India applies a mixture of cash and accrual based accounting. | Not announced |
| Indonesia | Adopted | Indonesia has adopted IPSAS type standards, but central and local government accounts are currently prepared on a modified cash and partial accrual basis. | 2015 |
| Jordan | Adopted | Jordan adopted IPSAS in 2015. But not all the standards are complied with and full implementation has not been achieved. | 2016 |
| Malaysia | Adopted | Malaysia implemented accrual standards based on IPSAS in 2015 for the federal government and in 2016 for state governments. | 2015/16 |
| Nepal Nepal | Partial | Nepal has adopted cash basis based IPSAS for its 16 government ministries. No announcement has been made regarding accrual basis IPSAS. | Not announced |
| C Pakistan | In progress | Pakistan has adopted cash basis IPSAS type standards as its reporting framework for central government. Disclosures around contingencies and accruals are not included. | Not announced |
| Sri Lanka | In progress | Sri Lanka has adopted 10 IPSAS standards into its IPSAS type standards. It announced in 2006 that 21 IPSAS standards would be adopted by 2012, but this has not been completed. | 2012, but not completed |
| ★ Vietnam | In progress | Vietnam is in the initial assessment stages of adopting IPSAS type standards. A revised Accounting Law came into effect in January 2017 mandating the adoption of accrual based standards. | 2020 |

3. Implementation in Pakistan

The Constitution of Pakistan delineates the authority of the Auditor General of Pakistan for prescribing the form, principles, and methods of accounts of the Federation and of the Provinces with the approval of the President. Under these conferred powers, the Auditor General has endorsed the Accounts Codes (Volume I to IV) and a New Accounting Model (NAM) for implementation when practicable. The PIFRA project is computerization of the accounting functions to enable the New Accounting Model to be implemented. Accounting functions are the responsibility of the Controller General of accounts.

Pakistan has made initial steps towards IPSAS conversion by aligning cash based accounting standards with cash basis IPSAS; however, there are significant differences. Reforms begins with the development and implementation of the New Accounting Model (NAM). Pakistan's accounting reforms have been carried on through a phased programme, which adopts the IPSAS. Since 2006/07, the state and

federal Financial Statements of Accountants General have been prepared using cash basis IPSAS. At present, financial statements blend the reporting formats under NAM and IPSAS cash basis by reporting cash flow statements over and above the requirements of cash basis IPSAS, with a focus on budgetary compliance for the financial year in line with the procedure established in the constitution. Pakistan has faced a number of challenges in moving to IPSAS. These include: the accuracy, reliability, completeness and timeliness of information; inconsistency of processes government entities in recognizing and recording transactions; and the capacity of finance staff at government entities to deal with the requirements of the standards, particularly as they change. There is also an of integration between accounting and budgeting, so that both frameworks are compatible and enable stakeholders to hold entities accountable for the manner in which they spend allocated resources.

4. Future Prospective

The adoption of IPSAS is gaining

momentum across the world. In the European announced the establishment and adoption of European Public Sector Accounting Standards (EPSAS) based on IPSAS with adoption dates to be determined by the respective countries. Further afield, Australia and New Zealand have already converted from IFRS to IPSAS type standards for the public sector. In Africa, South-East Asia and South America, statements of support for IPSAS have also encouraged a trend of adoption across developing countries.

Dear Valued Members/Students,

PIPFA Journal is the Official Publication of the Institute and is being published to keep abreast its members and students with the latest developments in Accounting Industry. We would welcome articles from our valued members and students for forthcoming issue on "Economic Recovery of Pakistan".

Other Possible Categories:

- · Performance and Financial Management
- Fiscal Budget

Guidelines for Submission of Articles for PIPFA Journal

- Articles must be focused in flow with the theme, passionate, compelling, developed gracefully, concrete, well suited for the readers and in compliance with ethical norms of the society.
- Criticism on official policies of any Governments/Organizations will be discouraged.
- If the article is based upon prior work of others; it is mandatory to quote references of websites and published articles.
- 4. Translation of a previously published article/paper is not permissible.
- 5. Articles should be simple with correct punctuation and grammar.
- 6. Article's words limit should not exceed

2000 words.

- All articles shall be checked for plagiarism with the help of specialized software and tolerable limit shall not exceed 20%.
- PIPFA will not publish any text/information which harms the image of the Institute and the nation.
- Editorial Sub-Committee has the right to amend submitted article by dropping criticism and controversial statements or details as needed without the consent of the author.
- The CPD & Publication Committee reserves the right to accept, reject or moderate articles, written by the Author.

Kindly send us your articles on or before July 31, 2020 so that same can become a part of the PIPFA Journal. Articles received after due date will be used for the successive volume upon approval of the CPD & Publication Committee. Members and Students are requested to send their articles at following email address at their earliest:

member@pipfa.org.pk

We are sincerely looking forward to receiving the articles.

Thanking You <u>Membe</u>r's Affairs Department

A winning streak
